

An Introduction to ASQ[®]:SE-2

What is ASQ:SE-2?

- Parent-completed questionnaires that reliably identify young children at risk for social or emotional difficulties.
- Screens 7 key behavioral areas—self-regulation, compliance, communication, adaptive functioning, autonomy, affect, and interaction with people

The 7 Key Behavioral Areas

- **Self Regulation:** The child's ability to calm or settle down or adjust to physiological or environmental conditions or stimulation.
- **Compliance:** The child's ability or willingness to conform to the direction of others and follow rules.
- **Adaptive Functioning:** The child's success or ability to cope with physiological needs.
- **Autonomy:** The child's ability or willingness to self-initiate or respond without guidance.
- **Affect:** The child's ability to demonstrate his or her own feelings and empathy for others.
- **Social-Communication:** The child's ability to interact with others by responding or initiating verbal or nonverbal signals.
- **Interaction with People:** The child's ability to respond or initiate social responses to parents, other adults, or peers.

How was ASQ:SE-2 developed?

- Developed as a complement to ASQ, developmental screening tool
- Work started in 1995 at University of Oregon
- Authors reviewed other standardized tests and studied the literature extensively
- First edition published in 2001; second edition published in 2015

What's New for the 2nd Edition

- 2 month questionnaire to screen infants as young as 1 month
- Expanded age range so you can screen children from 1–72 months
- New data and cutoffs based on updated research on more than 14,000 diverse children
- Monitoring zone cutoff that clearly identifies children close to the cutoff
- Quick Start Guide to help users implement ASQ:SE-2 accurately and effectively
- New behavior and communication items designed to elicit parent concerns that may point to autism and early communication issues

Why Choose ASQ:SE-2?

- Easy-to-use tool with deep, exclusive focus on children's social and emotional behavior
- Allows professionals to quickly recognize young children at risk for social or emotional difficulties
- Identifies behaviors of concern to caregivers
- Identifies any need for further assessment
- Cost-effective, parent/caregiver-completed, photocopiable, and culturally sensitive

Features of ASQ:SE-2

- 2-, 6-, 12-, 18-, 24-, 30-, 36-, 48-, and 60-month intervals
- Available in English, Spanish, and French
- Competence and problem behaviors targeted
- Externalizing and internalizing behaviors targeted

Screen with ASQ:SE-2

- Step 1: Complete the questionnaire
 - Each questionnaire has approximately 30 simply worded items
 - Parents answer “often or always,” “sometimes,” or “rarely or never”
- Step 2: Score the questionnaire
 - Scoring takes just 2–3 minutes
- Step 3: Share the results
 - Scores falling above empirically-derived cutoff points mean child should be referred for assessment
