# WHAT IS
ASQ® Online API?

❖ API (Application Programming Interface)

❖ Allows ASQ Online Enterprise and Pro accounts to connect with another database management system or application

❖ Automated way to import and export data between an ASQ Online account and an external customer database management system

API is the bridge that allows two database systems to connect.

Your Database Management System

API
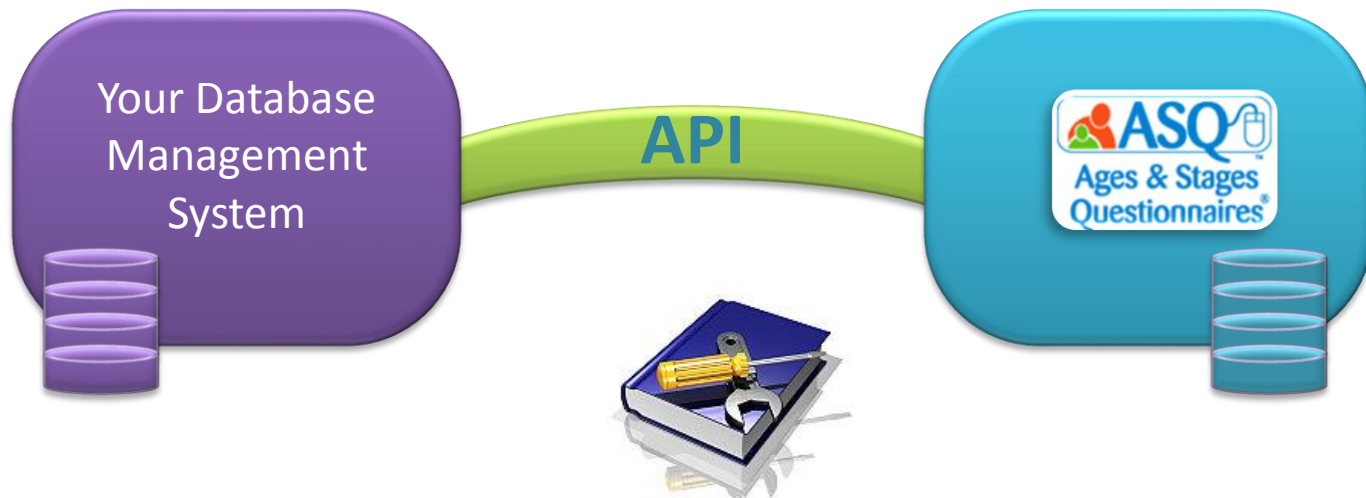

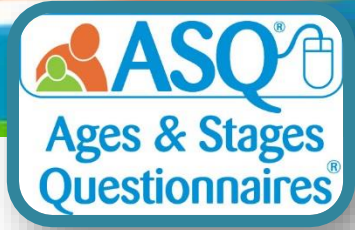

ASQ Online provides the tools and instructions to allow your developer or IT professional to create the bridge.
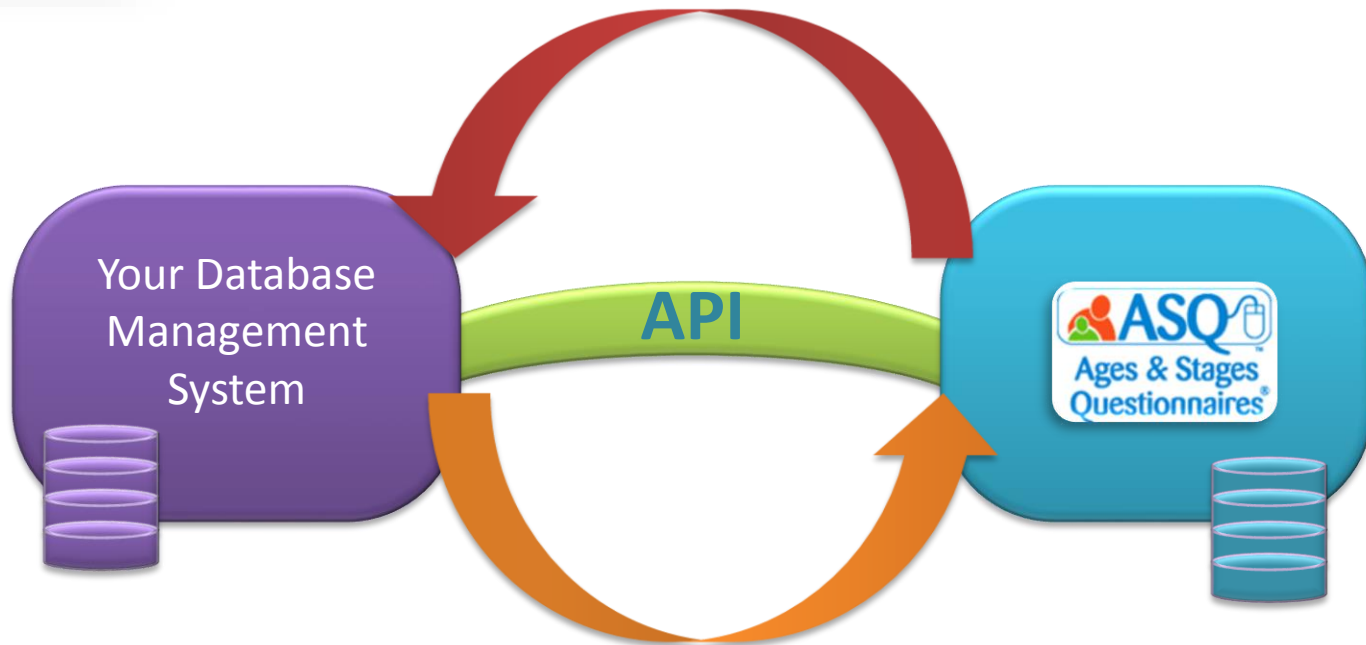

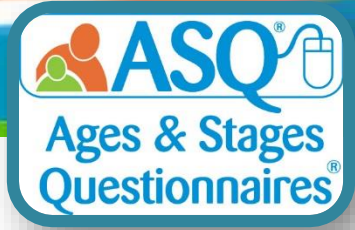

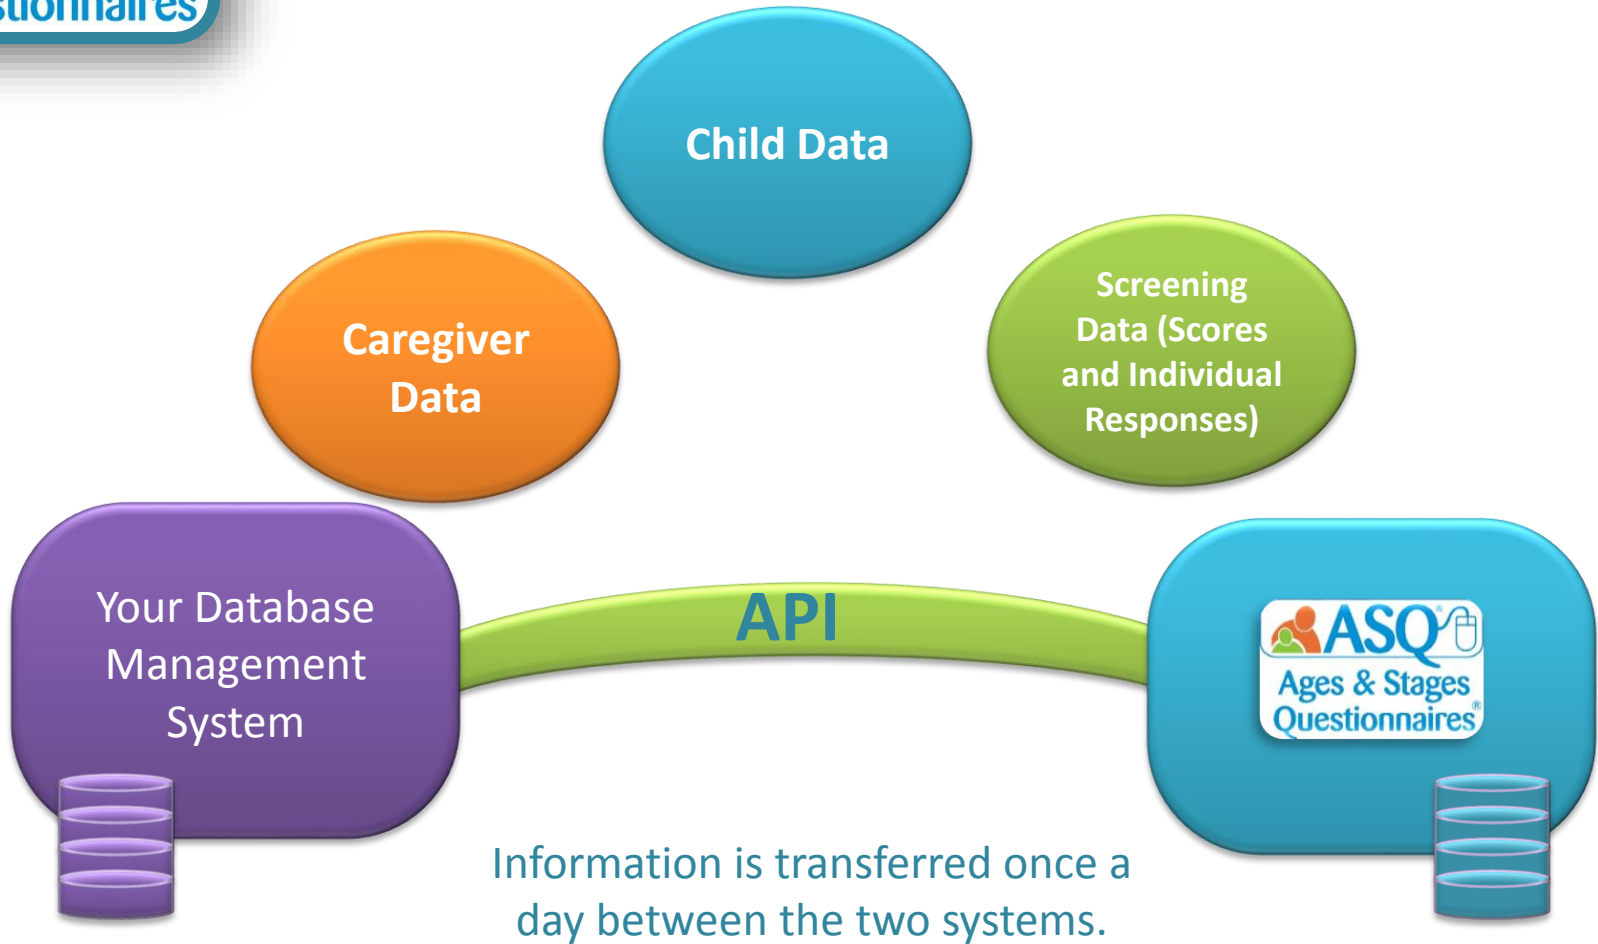

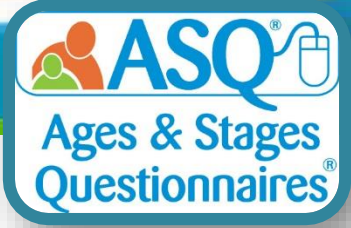

Once the bridge has been created, data
can automatically travel, or flow,
between your system and ASQ Online.
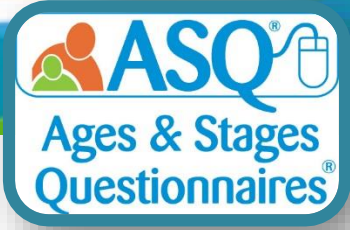

What type of information can flow between my database management system and ASQ Online?
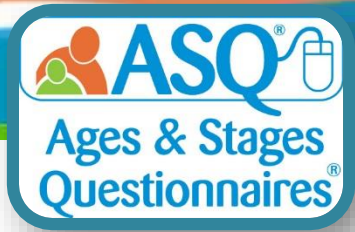

Child Data

Caregiver Data

Screening Data (Scores and Individual Responses)

Your Database Management System

API

Information is transferred once a day between the two systems.

How do I get started with API?

Step 1 → Purchase the API add-on subscription.

Step 2 → Generate the API tokens for your account or programs within your account (Instructions to generate tokens will be available in the *API Quick Start Guide for Admins*). Your developer or IT professional will need the API tokens to open up access to your account or program data and create the bridge.

| Program	Contact name	Contact email	API Token	
Program A	Lisa Brack	lbrack@brookespublishing.com	51f63bc8f15592814b2bd89368706be1	Remove Token
Program B	Lisa Brack	lbrack@brookespublishing.com	ba29e7b05cd98c5c19686a81741e7327	Remove Token
Program C	Lisa Brack	lbrack@brookespublishing.com	2867524a3eb5b117e3da7c826932

Step 3

The ASQ Online Account Administrator will provide the developer or IT professional with the API tokens and the API documentation needed to develop the interface with ASQ Online.

Step 4

Using the API Documentation provided, the developer or IT professional will create the "bridge" to connect your system with ASQ Online.
