Ages & Stages Questionnaires® (ASQ®)

Articles endorsing Ages & Stages Questionnaires® as an accurate, cost-effective, parent-friendly instrument for screening and monitoring of preschool children:

**ASQ Review Articles**

**Psychometric studies:**

**Early detection of autism, joint committee for screening and diagnosis of autism and used for first level ASD screening:**

**Recommended for general developmental follow-up:**

**Used successfully for screening and developmental surveillance in office settings:**

Used successfully for follow up and assessment of premature and at-risk infants, randomized medical trials, and interventions related to developmental outcomes:

Hutchison, B. L., Stewart, A. W., Mitchell, E. A. (2011). Deformational plagiocephaly: a follow-up of head shape, parental concern and neurodevelopment at ages 3 and 4 years. *Archives of Diseases in Childhood, 96*(1), 85–90. https://doi.org/10.1136/adc.2010.190934

**Used successfully for screening and follow-up of children in foster care, public health, hospital, infant mental health, and day care, Early Head Start community settings:**

**Used for teaching medical students about early development:**

**Used to evaluate the role of early fine and gross motor development:**

Used successfully for follow up of infants born after infertility, assisted reproductive technologies:

**Low-cost alternative—annual cost of $25.00–$50.00 for following children:**

**Used successfully in home visiting and Early Head Start programs:**

**In community day care settings:**

**In inner-city public health clinics:**

**Used for evaluating the 2006 American Academy of Pediatrics developmental surveillance and screening algorithm**

Used to evaluate the role of early fine and gross motor development on later motor and cognitive ability:

Used to screening dual language learners, language enhancement, determine the prevalence of late-language emergence, and to investigate the predictive status of maternal, family, and child variables:

Translated and used cross-culturally with success:

Studies by the authors of ASQ:

  - Normative sample of over 18,000 questionnaires across 21 intervals from 2 months to 5.5 years. High reliability (> 90%), internal consistency, sensitivity, and specificity. See http://www.agesandstages.com for ASQ-3 Technical Report for complete psychometric data.
